

Training Workshop

Nextflow Summit Boston, May 13-14, 2025

Overview

This two-day workshop is an introduction to Nextflow, designed for those new to computational workflows, but not necessarily new to computational experiments. The sessions will introduce the basic concepts of Nextflow as a workflow management tool using practical, hands-on examples.

Requirements

The workshop material does not require any experience with Nextflow, but some familiarity with Linux and running tools on the command line would be helpful. The training will be interactive and participants are strongly encouraged to follow along.

We will be running the training with Github Codespaces, which provides an integrated development environment directly within a web browser (preferably Google Chrome). The workshop material will be available within the Codespaces workspace. Please create and check that you can log in to your Github Codespaces account prior to the start of the training by following the [instructions here](#).

Agenda

Tuesday, May 13

Time (EST)	Topic
9:00 AM	Registration and Breakfast
10:00 AM	Training Sessions 1
1:00 PM	Lunch
2:00 PM	Training Session 2
4:45 PM	Training Wrap-Up
5:00 PM	Social Event
8:00 PM	End
